

How to make an easy fish snow globe

The UK produces over 5 million tonnes of plastic waste per year, with much of this finding its way into natural environments. Plastic takes hundreds of years to break down, and even tiny fragments (called microplastics) can find their way into our rivers and oceans – eaten by fish and working their way up the food chain.

You will need:

Empty, clean plastic bottle
Assorted plastics from your recycling
Scissors
Water

What to do:

1. Cut out lots of fish shapes from your plastic recycling. You can make other water creatures too if you like.
2. Put the fish inside your plastic bottle.
3. Fill the bottle up with water.
4. Put the lid tightly back on the bottle.
5. Swirl the bottle around and watch the fish swim.
